

Tick Test – Analysis Order

Important notes

The tick sent in is examined for the presence of **Borrelia bacteria** and/or **Tick-borne encephalitis (in German Frühsommer-Meningoenzephalitis or FSME)**. The result will be sent by e-mail.

- if the result is positive, we recommend visiting your doctor.
- in the case of a negative finding, there is only a very low probability of Borrelia transmission. However, since other pathogens can also be transmitted by ticks, you should still observe the puncture site and the general state of health and if necessary, visit the family doctor.

1. Address of client

Company/Institution	
Name, first name*	
Street*	
Postcode/Place*	
Telephone/Fax	
Email*	

* Mandatory fields

2. Information about sample

Suspected area of the tick (for example: Allschwilerwald, 4123 Allschwil):
